

API Document

API and SDK Documentation

Version: 1.0.5

Overview

This section describes the category endpoints for the GET and POST method.

Categories

Using this method you can create, update, fetch, list, and delete a category from the database.

Default

publicApiCategoriesGet

This method allows you to view all the categories.

GET

/public-api/categories

Usage and SDK Samples

- Curl
- Java
- Android
- Obj-C
- JavaScript
- C#
- PHP
- Perl
- Python

```
import io.swagger.client.api.DefaultApi;

public class DefaultApiExample {

    public static void main(String[] args) {
        DefaultApi apiInstance = new DefaultApi();
        String authorization = authorization_example; // String | This is a mandatory header parameter to complete authorization. This Parameter contains bearer token.
        try {
            'String' result = apiInstance.publicApiCategoriesGet(authorization);
            System.out.println(result);
        } catch (ApiException e) {
            System.err.println("Exception when calling DefaultApi#publicApiCategoriesGet");
            e.printStackTrace();
        }
    }
}
```

Parameters

Query parameters
